Ministero delle Imprese e del Made in Italy

Il Ministero vicino alle imprese

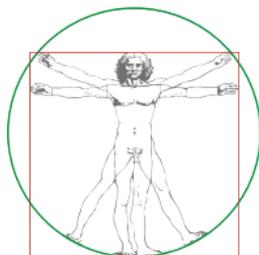

Il **Ministero delle Imprese e del Made in Italy**, con l'obiettivo di rafforzare la propria presenza sul territorio e offrire un supporto più efficace alle imprese italiane, ha creato una rete di presidi territoriali: le **Case del Made in Italy**.

In virtù del loro radicamento locale, le Case del Made in Italy sono destinate a diventare **l'interlocutore diretto dei bisogni emergenti dal territorio** e a fungere da **trait d'union tra il Ministero e le realtà locali**, all'interno di un nuovo modello di governance orientato alla **valorizzazione delle imprese**.

Grazie ai protocolli d'intesa stipulati dal MIMIT con i principali enti fieristici, le Case del Made in Italy partecipano alle maggiori manifestazioni **fornendo attività di orientamento, ascolto qualificato e raccordo istituzionale**, ed in particolare:

- diffusione delle politiche e degli strumenti del MIMIT
- assistenza su incentivi e misure di sostegno alle imprese
- supporto alla tutela delle filiere produttive
- raccolta delle esigenze del territorio e invio alle strutture ministeriali competenti.

Sperimenta, testa, innova: le opportunità della stampa 3D e della microscopia

L'intervento approfondisce il ruolo del design e della stampa 3D come strumenti concreti per sviluppare prototipi, testare soluzioni e valutare nuove tecnologie prima di intraprendere investimenti produttivi più strutturati. Grazie all'esperienza dell'Hub di Design e stampa 3D di TEC4I FVG, verrà mostrato come la sperimentazione diretta permetta di ridurre rischi, tempi e costi di sviluppo.

Successivamente, verranno presentate le opportunità offerte dai percorsi guidati di sperimentazione sulle tecniche avanzate di microscopia; questa attività rappresenta uno strumento fondamentale per analizzare materiali, superfici e prototipi. Basandosi sul modello TEST BEFORE INVEST, il network nato nell'ambito del Progetto ALL-MICRO cofinanziato dal Programma Interreg VI Italia-Slovenia, supporta imprese, istituzioni ed enti pubblico-privati nel migliorare prodotti e processi in maniera efficace e misurabile."

Il mercato globale dello stampaggio delle materie plastiche: si può ancora essere competitivi?

I nuovi trend evidenziano uno spostamento della produzione di stampi e manufatti plastici stampati a iniezione verso l'Asia. Tuttavia, settori come packaging, medicale e automotive restano di grande interesse per il loro elevato contenuto tecnologico, ambito in cui l'industria europea può ancora offrire un contributo significativo. In particolare, l'automotive è in piena trasformazione: il passaggio ai veicoli elettrici introduce nuove e stimolanti sfide per il settore dello stampaggio. Il gruppo Voestalpine offre al mercato non solo acciai speciali, ma anche un pacchetto completo di servizi per soddisfare queste esigenze.

Applicazioni di tomografia industriale ad alta velocità per controlli in linea di produzione: un nuovo paradigma per il controllo di qualità

In questo speech verranno evidenziate nuove possibilità tecnologiche per il controllo di qualità su pezzi stampati o estrusi in plastica/alluminio. L'attuale tecnologia consente di sfruttare le enormi potenzialità della tomografia XRAY direttamente in-line senza attendere lunghi e costosi report da laboratori specializzati. Verranno presentate le nuove macchine della famiglia READY ad alta velocità, trasportabili e adatte ad operatori non qualificati in grado di funzionare perfettamente in ambienti di produzione.

Sicurezza e Innovazione nelle Lavorazioni dei Metalli: Soluzioni Avanzate per la Protezione degli Operatori

Solvepi introduce tecnologie che migliorano produttività e sicurezza. Nelle lavorazioni dei metalli, l'uso di abrasivi è essenziale ma comporta rischi immediati e a lungo termine. Oltre ai DPI, è cruciale scegliere l'abrasivo corretto per ridurre l'esposizione. Con il supporto degli esperti 3M, vengono analizzati i principali rischi e presentate soluzioni per aumentare la sicurezza operativa.
